MOHAMMAD GHAZI ABBAS

FULL STACK DEVELOPER

Lucknow, India | Open to Relocation | LinkedIn | GitHub | Portfolio | 8299390068 | ghazi.cse@gmail.com

PROFESSIONAL SUMMARY

Full Stack Developer who designed and built **Foodie**, a role-based food delivery application, using **Java, Spring Boot, and React.js**, implementing well-structured **RESTful APIs, JWT-based authentication, and role-based access control (RBAC)**. Strong foundation in **clean layered architecture, scalable system design, and performance-aware development**, developed through **industry-aligned, hands-on engineering training** in the **NIIT Full Stack Development with GenAI Honours Program**.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering | 2020 – 2024
Babu Banarasi Das Northern India Institute of Technology (BBD NIIT), Lucknow
CGPA: 7.75

TRAINING & CERTIFICATIONS

Full Stack Development with GenAI Honours Program – NIIT
Completed: February 2026

- Completed industry-aligned training focused on **applied full-stack engineering**, secure backend development, and real-world system design.
- Built **production-style applications** using **REST APIs**, **JWT-based security**, **role-based access control**, and **React frontend integration**.
- Gained exposure to **microservice fundamentals**, scalable application design, and collaborative development practices.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, C++, SQL
Frontend Development: React.js, React Hooks, React Router, Axios, Tailwind CSS, Responsive UI Design
Backend Development: Spring Boot, RESTful API Development, JWT-Based Authentication & Authorisation, Role-Based Access Control (RBAC), Layered Architecture
Databases: MongoDB, MySQL, Schema Design, Indexing, Query Optimisation
Caching & Performance: Redis, Pagination, API Performance Optimisation
Cloud & Deployment (Foundational): AWS S3 (Object Storage), AWS EC2 Basics, Environment Configuration, Deployment Fundamentals
AI Integration (Applied Basics): Chatbot Integration, Prompt-Based AI APIs, Intelligent Feature Integration
Developer Tools: Git, GitHub, Postman, IntelliJ IDEA, VS Code

PROJECTS

1-Foodie – Full-Stack Role-Based Food Delivery Platform | GitHub

- **Designed and built a role-based food delivery system supporting users, restaurant owners, delivery partners, and admins, each with dedicated workflows and dashboards.**
- **Implemented end-to-end order management covering cart validation, order placement, status transitions, cancellations, and role-based order history.**
- **Developed restaurant management features, including onboarding with admin KYC approval, menu creation, pricing and availability control, order acceptance, and restaurant-level analytics.**
- **Built admin revenue and analytics dashboards using Recharts to track orders, revenue trends, restaurant performance, and platform activity.**
- **Integrated AI-assisted features, including a chatbot for food exploration, cart interaction, and order flow, along with speech-based search, live GPS tracking, email notifications, and PayPal Sandbox payments.**
- **Secured the platform using JWT authentication, RBAC, bcrypt password hashing, and OTP-based email verification.**
- **Improved scalability and performance through Redis caching, pagination, optimised REST APIs, AWS S3 media storage, and secure API communication via Axios interceptors.**

2-Dairy Delights – Frontend E-Commerce Application (React.js) | GitHub

- **Designed and built a role-based food delivery system supporting users, restaurant owners, delivery partners, and admins, each with dedicated workflows and dashboards.**
- **Implemented user and admin UI workflows, including product browsing, cart management, and order simulation.**
- **Used JSON Server to simulate backend APIs for products, cart, and orders during frontend development.**
- **Designed protected routes and role-based UI access to mirror real-world authorisation flows.**
- **Focused on clean component structure, state management, and frontend performance.**

TECHNICAL ACHIEVEMENTS & ENGINEERING PRACTICE

- **Solved 150+ Data Structures and Algorithms problems on LeetCode and GeeksforGeeks, strengthening problem-solving, algorithmic thinking, and optimisation skills.**
- **Created High-Level and Low-Level Designs (HLD/LLD) for full-stack systems with a focus on scalability, secure access control (RBAC), and clean architecture.**
- **Applied JWT-based authentication, REST API optimisation, caching strategies, and database schema design while building end-to-end applications.**
- **Maintained a 50-day LeetCode coding streak, demonstrating consistency, discipline, and continuous learning.**
